The book is divided into three parts. The first part covers the basics of multimedia systems, including the different types of media, the principles of compression and coding, and the different architectures for multimedia systems. The second part covers the different applications of multimedia systems, including multimedia conferencing, multimedia streaming, and multimedia authoring. The third part covers the future of multimedia systems, including the emerging trends in multimedia technology and the challenges that need to be overcome.
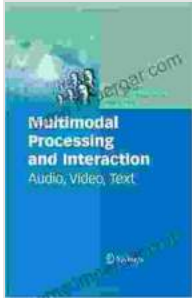

Audio Video Text Multimedia Systems And Applications 33 is a valuable resource for anyone who is interested in learning about the latest developments in multimedia systems and applications. It is also a useful reference for anyone who is working in the field of multimedia.
